
A SECOND 'GIANT STEP FOR MANKIND'

Man's landing on the far side of the moon is a true discovery of the unknown

Pierre Beaudry, 12/26/2018

Since China launched its Chang'e-4 Moon mission on December 7, 2018, it has successfully put into lunar transfer orbit its lander and rover in preparation for a landing on the far side of the Moon during the first week of the New Year.

This means that the times at which we will be entering 2019, are going to be very hectic and axiomatically challenging for all of mankind. Why? Because mankind will be discovering, for the first time in its history, the true creative purpose of humanity.

The way this discovery will be made is through a triply-connected dialogue among Europe, America, and Asia, and it will be triggered by China in a manner such that the geopolitical world of the British Empire is going to be dumped once and for all and a New World Economic Order will emerge in a New Bretton Woods coalition among the United States, Russia, China, and India. That is, of course, if the Anglo-American war party doesn't blow the world up first by provoking a senseless war.

The singularity which is triggering this axiomatic transformation is the soft landing of China's Chang'e - 4 on the far side of the Moon. The intention behind this Chinese lander is going to force the whole of mankind to discover what it means to discover the unknown; that is, what is not there. We are going to see, for the first time in our history, what we thought it was impossible to see.

The irony is that the fake news of CNN and other Anglo-American media assets never intended you to know what is happening on the other side of our own planet. As China goes even further away than usual, and hides behind the Moon, this will cause the Eastern side of the Earth to finally becoming unified with the West.

HAPPY NEW YEAR AND HAPPY NEW WORLD!
